WATTS®

Constant home water satisfaction in a changing world.

The ProSense™ Professional Water Treatment System by Watts® is designed for a planet that can no longer take water for granted. In an environment where the quality of a home's water can vary significantly... even from day to day... the ProSense™ System delivers conditioning performance that's completely consistent. Better still, it does so while saving regenerant and using less water. And it's great for our planet!

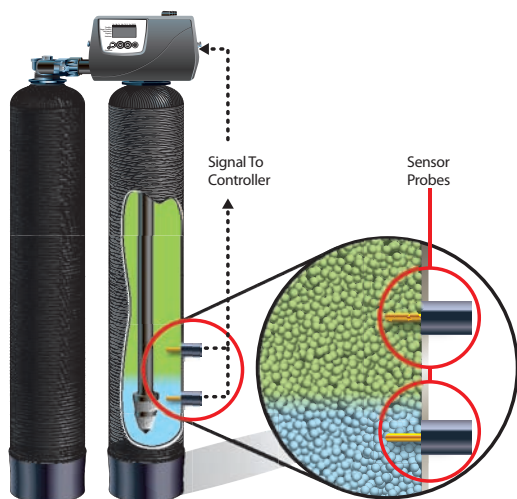

ProSense™
Water Treatment System

MAXIMUM EFFICIENCY

15% SAVINGS

Save up to 15% in regenerant and water

ADVANCED SENSOR TECHNOLOGY

- Superior monitoring with non-corrosive 18-karat gold-plated sensor probes
- Replaces traditional metered and timeclock controls

ECO-FRIENDLY

- Fewer regeneration and rinse cycles conserve water and regenerant

24/7 MONITORING

- Automatically adjusts to changing water conditions
- A continuous supply of quality water is always available

UPFLOW REGENERATION

- Improves efficiency and eliminates resin bed compaction

Advanced sensor technology that never sleeps

Twenty four hours a day, a pair of gold-plated electronic sensors report the water condition to the ProSense™ controller. They trigger an instant response that delivers two big benefits:

- **Consistent quality** – sensors signal a drop below optimum condition, so water never passes through untreated.
- **Efficiency to the max** – the system uses 100% of its treatment capacity before regenerating, saving both water and regenerant.

The sensors are always on guard against changes in the water conditions, responding only when the time is right to protect water quality and conserve valuable resources.

A microcomputer “brain” keeps performance at its peak

The nerve center of each ProSense™ is a dedicated microcomputer designed to respond to changes in system status with a sophistication that traditional systems cannot match.

- **Microprocessor based** – outdated metered and timeclock controls are replaced with a precise electronic control system.
- **Time-tested components** – the computer is coupled with a top-quality ProSense™ control valve with a proven reputation for trouble-free operation.

Two tanks, teamed up for constant conditioning

There's no need to worry about ProSense™ delivering less than its full conditioning power. When a tank depletes, the system simply switches to a fresh tank.

- **No interruption** – the switch eliminates the potential for unconditioned water to pass through. Homeowners won't even know a changeover is taking place.
- **Less waste** – able to use 100% of a tank's conditioning capacity, which means less regeneration... and less regenerant water returning to the environment.

The most efficient softener on the market

*Unites States Patent Number 7,329,338 B2

Enjoy instant improvement in the quality of your water.

From the moment you install a ProSense™ Professional Water Treatment System, everyone in your home will notice the benefits of consistently fresh-conditioned water.

- Richer, foamier lathers from soaps and detergents
- Fluffy and absorbent towels that soak up water like magic and feel silky smooth against your skin
- Streak free glassware, without the filmy damage that robs fine crystal of its beauty
- No more stains and scaly buildup on sinks, tile, and plumbing fixtures
- Money saved by buying less soap, and by eliminating the hard water buildup that makes appliances less efficient and shortens their life
