WATTS®

The simple choice for water quality.

Watts Has the Solution to Filter Your Drinking Water While Retaining Nutrients

If you have sediment, chlorine, impurities, or unpleasant tastes or odors in your water, the Watts drinking water system provides high-quality filtration to protect your family.

Our **compact, under counter, ultra filtration membrane system** is an affordable choice when installation space is limited. Convenient and easy for homeowners to maintain, it provides excellent protection from a wide range of impurities without removing nutrients.

Our drinking water systems use proven designs in many configurations to produce high-quality, great-tasting water.

Quick-Change™ Under Counter Drinking Water System

Reduces Sediment, Chlorine, and Cysts

The Quick-Change under counter drinking water system is a compact, easy-maintenance unit that installs quickly and starts producing high-quality water immediately from a dedicated faucet. Its three-step system uses ultra-filtration technology to reduce cysts, chlorine taste and odor, as well as up to 97% of particulates and other sediment while leaving nutrients such as calcium and magnesium in the water.

- Includes attractive long reach faucet
- Under counter system:
No filter sumps, no mess, no fuss
- 1/4-turn pivot filter heads reduce space requirements, provide easy access
- Built-in shutoff valves speed up filter replacement
- Hollow fiber membrane filters particles down to 0.1 Micron (Nominal)*

*One grain of salt equals approximately 100 microns

3-STEP ULTRA-FILTRATION

- 1 Sediment Cartridge** reduces suspended particles
- 2 Carbon Block** reduces chlorine, unpleasant tastes, and odors
- 3 Hollow Fiber Membrane** reduces cysts and fine sediment

Standard Filtration Made Simple

- **Healthy**
Reduces chlorine and cysts
- **Convenient**
Easy access for fast filter replacement
- **Reliable**
Double O-ring in each cartridge prevents leaks

LET IT FLOW *fresh and simple.*
